

COLOURED PLASTIC

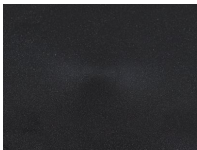

SPECIFICATION

Material Type Plastic **Pattern** Solid

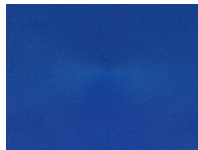

ABOUT

Coloured plastic is a durable material that maintains its beautiful colour through wear and tear as it is coloured all the way through. As different plastics have different attributes, we consistently select the best material required for the product and with environmental and sustainability aspects in mind. All our plastics are intended to re-enter the material cycle and are marked to facilitate recycling. There are many materials and colours to choose from, but options vary between our furniture ranges.
